The Sheriff's Department

The unique role of the Sheriff is both a political and a legal office. When the legislature divided California into 58 counties between 1850 and 1907, it drew boundaries that generally followed human settlement patterns and the state's natural landscape. The population of the state was initially attracted to the cities and towns due to commerce and then spread to the outlying areas to develop agriculture and ranching. With the population growth came the need for law enforcement.

The Sheriff's accountability has grown to include general law enforcement in the unincorporated areas, both patrol and criminal investigation; as well as civil processing, maintenance of jail facilities, prisoner care and transport, court protection, as well as coroner and public administrator duties. Often the Sheriff is tasked with providing dispatching services, CLETS and E911 to municipal police departments, and regional services such as bomb technicians, Search and Rescue, and SWAT teams. The Sheriff often contracts police services to cities in a collaborative effort to provide professional law enforcement services at a reduced cost.

Single Input of Data

Documenting incidents fully and efficiently is a requirement of all law enforcement agencies. Time and effort can be saved by automating the Records Management System (RMS). *TracNet*™ provides an agency-wide system that processes the entire life span of a document. This makes it possible for all information, records, documents, or files that are related to a single subject or case, to be effectively stored, retrieved, retained, archived viewed and analyzed. Records related to the department's responsibility include crime reports, criminal records, jail, property, and crime analysis.

TracNet™ requires _one source_ of data input to populate multiple relational databases, and enables an agency to deal with its records in a simple, useful environment. It also provides the ability to generate crime statistics for MACR and UCR reporting.

Reduce the Costs of Records Management

TracNet™ integrates all departmental record functions to reduce duplication of entry, thereby improving the accuracy and utility of information, minimizing data handling, and developing consistent chain of reporting and analysis.

Affordable Incident Reporting

Looking for an affordable answer to your incident reporting problems? *TracNet*™ provides you with all the essentials for accurate and dependable incident reporting in a user-friendly intuitive format. *TracNet*™ is designed _for_ law enforcement _by_ law enforcement. We specialize in providing comprehensive, integrated, public safety automation solutions on the leading edge of technology.

Four Integrated *TracNet*™ Modules:

- **CAD** (Computer Aided Dispatch) with GEO address verification, CLETS integration, and E911 integration.

- **RMS** (Records Management System) with criminal and non-criminal reporting, FI, licensing (guns, parking, bicycles, etc.), citation management, fees, bar coding of property and evidence, integrated photo imaging (images with crime cases), Coroner reports, multi-jurisdictional data sharing.

- **JMS** (Jail Management System) includes booking module with booking image and tattoo tracking, visitor records, prisoner accountability, incident reporting, automatic California Drivers License reading, Automated MACR and UCR Reporting, Livescan fingerprint integration.

- **Mobile** (Mobile Field Reporting) with automatic upload to RMS, wanted flyer creation, crime mapping, and more…

Information Where and When It's Needed

The *TracNet*™ Records Management System

searches through massive quantities of information to provide officers in the field with the information they need (and only the information they need) displayed in a meaningful format. The process of entering information and making inquiries are integrated, so that the process of storing and retrieving information about all previous contacts with people, vehicles, locations, or property is fast and easy, with no wasted time and effort.

Simplicity is important

In today's world, crime analysis and information delivery—to the right people at the right time—play a critical role in maintaining calm and order. Law enforcement agencies at all levels must have mechanisms for securely sharing and protecting critical information, ensuring legislative compliance, and meeting the needs of a real-world environment through industry-proven tools. By aligning IT resources with agency objectives, you can improve resource deployment, simplify systems management, and straightforwardly administer technology. To that end, **TracNet**™ software has been serving California law enforcement with CAD, Records Management, Jail Management, and Mobile modules suite since 1986 through its integrated software.

Client Server

TracNet™ systems use powerful, reliable client/server technology. Client PCs and laptops use the familiar and easy-to-use Microsoft Windows™ user interface. Servers are based on a powerful, IBM 64-bit, scaleable industrial server selected for its reliability, speed, power, and security.

CAD - Computer Aided Dispatch

- GEO File Support
- E911 Interface
- Integrated Mapping support
- CLETS Interface
- Command Line Support
- Simple drag and drop interface
- Integrated to the RMS

JMS - Jail Management Systems

- Booking Photos\Marks\Scars\Tattoos
- Visitation Tracking
- Security Classification
- Inmate Movement tracking
- Sentencing and DSS Interface
- Livescan interface
- Multiple facility management
- CDL/ID Mag-strip swipe entry
- Auto prompt for violations
- SSA Interface\VINES Interface
- Automated DOJ E-CARS MACR support

RMS - Records Management

Modules Included

- Crime Case
- DUI
- Traffic collision CHP 555\556
- Booking with Tattoo tracking
- Citation
- Parking Citation
- Multiple FI entry
- Business Responsible
- Pawned Property
- Licensing of bikes\guns\taxis\vehicles
- Want Warrant
- Gang tracking \ Career Criminal
- Known Offender
- Probation Parolee
- Registrant

Crime Cases include:

- Case Solvability
  - Case management
  - Bar Coded Property
  - Crime analysis
  - Crime Mapping
  - Line Ups
  - Case to Court Tracking
  - 293 PC compliant printing
  - 964(b)PC compliant printing
  - Notify of images at printing
  - Notify unapproved case printing

> **"TracNet's goal is to provide California Law Enforcement with successful, effective, and affordable automation solutions and service"**

Most Modules Also Include:

- Integrated Images
- Audio Attachment
- Scanned Documents
- Fee Tracking
- False alarm billing module
- Case approval holds
- Numerous data analysis reports

Mobile solutions for RMS & CAD

- RMS entry, inquiry
- CLETS Interface
- Integrated Mapping support

Ease of use with

- Automatic CDL/ID reading
- Livescan integration
- City-street tables
- Auto-fill crime validation table
- Multi-jurisdictional data sharing
- CA DOJ E-CARS Plus (MACR and UCR)
